TI Methods and compositions comprising insulin/diketopiperazine complex for minimizing accrual of inhalable insulin in the lungs

AB The present invention relates to inhalable insulin compns. comprising insulin/diketopiperazine complex for rapidly clear from the lungs of patients. Specifically, the inhalable insulin composition is a dry powder and the insulin complexed with a diketopiperazine, such as fumaryl diketopiperazine. In another embodiment of the method of the present invention, a patient's lung function is not depressed on extended use of the inhalable insulin composition, wherein the patient's lung function is not impaired relative to the same patient not receiving an inhaled insulin composition

L4 ANSWER 2 OF 2 USPATFULL on STN

TI Diagnosis and monitoring of diseases

AB The present invention relates to the diagnosis and monitoring of diseases and conditions by quantifying markers, including degradation products of disease-associated proteins, such as diketopiperazines composed of the two N-terminal amino acids or the two C-terminal amino acids of such proteins. The methods are useful for diagnosing or monitoring various diseases, including multiple sclerosis, Alzheimer's disease and ischemia. The invention further provides binding partners specific for the markers and compositions and kits for conducting the methods of the invention.
